Art Unit: 2828

## **DETAILED ACTION**

## **Drawings**

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the light output of the laser device is coupled to a optical fiber such that light from an optical fiber is feedback to the laser device must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

<sup>(</sup>e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Art Unit: 2828

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 3, 4, 9, 12, 15 – 17, 20, and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Shimizu et al (6,396, 861 B1).

Regarding claims 1 and 3, Shimizu discloses a semiconductor pumping laser device comprising; a resonator cavity having a first end face and second end face, and comprising a cavity portion between the first and second end face, the cavity portion having a length grater than or equal to 1,200  $\mu$ m and width that can only support a single transverse mode; a laminated structure of a semiconductor material including an active layer comprising at least one quantum well structure, said laminated structure being formed on a substrate and having at least a portion disposed in said cavity portion; a low reflection film formed having a reflectance of 5 % or less on one end face of the structure; and a high reflection film having a reflectance of 80 % or more formed on the other end face of the structure (Column 4, lines 21 – 29, 58 – 36, Column 5, lines 7 – 19, 51 – 67, Column 6, lines 1 – 11 , 45 – 52, and Column 8, lines 6 – 13 and 49 – 51).

Art Unit: 2828

Regarding claims 4, 12, 16, 17, and 27 Shimizu discloses a active layer has no more than two quantum wells, wherein said structure comprising a gallium, arsenide, and wherein said laminated structure includes at least gallium an arsenide and includes at least indium and nitrogen (Column 8, lines 31 - 45).

Regarding claim 9 Shimizu discloses a semiconductor-pumping laser emits light in the 0.98  $\mu$ m wavelength-band (Column 1, lines 19 – 21 and 61 - 62).

Regarding claims 15, 20, and 25, Shimizu discloses the light output of the laser device is coupled to a optical fiber such that light from an optical fiber is feedback to the laser device (Column 1, lines 44 - 50).

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2, 5-8, 10-11, 13-14, 18-19 21-24, 26, and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimizu et al (6,396,861 B1) in view of DeMars et al (6,122,299).

Art Unit: 2828

Regarding claims 2, 5 - 8, 10 - 11, 13 - 14, 18 - 19 21 - 24, 26, and 28

Shimizu discloses the claimed invention except for the semiconductor device has a transverse light confinement structure with the transverse refractive index difference of about 1x10<sup>-2</sup> for oscillation modes, the coefficient of light confinement to the active layer range for 1% to 2% and the output light of the laser id free of kinks for driving currents up to at least 350 mA, where a kinks is a variation of 15% or more in the external differential quantum efficiency of the laser relative to the initial value present when the injected current just exceeds the threshold current. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to semiconductor device has a transverse light confinement structure with the transverse refractive index difference of about 1x10<sup>-2</sup> for oscillation modes, the coefficient of light confinement to the active layer range for 1% to 2% the output light of the laser id free of kinks for driving currents up to at least 350 mA, where a kinks is a variation of 15% or more in the external differential quantum efficiency of the laser relative to the initial value present when the injected current just exceeds the threshold current. since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Art Unit: 2828

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Delma R. Flores Ruiz whose telephone number is (703) 308-6238. The examiner can normally be reached on M - F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Ip can be reached on (703) 308-3098. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7722 for regular communications and (703) 308-7724 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 306-3431.
